Immunohistochemistry (IHC) Report

Patient Details	Account Details	Specimen Details	Ordering Physician
Name: ANDINET GIRMA MRN: N/A Age/Sex: 41Y / F Phone: 0939035191 Hospital: WASHINGTON MEDICAL CENTER	ONCO 	Acession Number: OI26-633 Date Received: 2026-02-27 05:39 PM Date Report: 2026-03-04 05:28 PM	DR.SEIFU

Block Number

OB26-1744

Clinical History

BMB- Secondary Infiltrates of Carcinoma, likely Adenocarcinoma

Final Diagnosis

BMB (IHC): Secondary adenocarcinoma of breast primary; ER: Positive; PR: Positive; HER2: Negative.

Comment

Due to decalcification related epitope changes biomarker scoring may not be accurate.
N.B. IHC was carried out on formalin fixed, paraffin-embedded sections. All controls (i.e. Internal negative patients tissue and external positive control) show appropriate reactivity. Detection system used is Envision FLEX system, universal DAB detection, with or without amplification kit on Dako Autostainer Link48.

Microscopic Description

Procedure: Trephine biopsy

Site of tumor: Bone marrow

Histologic type/diagnosis: Kindly refer OB26-1744

Immunohistochemistry: Custom panel

Monoclonal antibody used: CK7, CK20, GATA3, ER, PR, and HER2

Interpretation:

The cells are diffusely positive for CK7, and GATA3. They are negative for CK20.

ER: 80% strong nuclear expression seen; Allred score: 8.

PR: 95% strong nuclear expression seen; Allred score: 8.

HER2: Faint incomplete membranous staining seen in >10% of tumor cells. Her2 score: +1

Gross Description

One formalin fixed, paraffin embedded tissue block labeled as OB26-1744 was retrieved, H&E was revised and custom IHC was carried out.

Primary Pathologist

Dr. Fadil Nuredin

Electronically Signed out at 2026-03-04 05:28 PM
